

FINALLY, AFFORDABLE SOLAR HOMES!

Woodland Homes USA has developed the nation's first net zero solar powered factory built homes.

The definition of "net zero" is simply no utility bills. "Our homes have been designed to be extremely energy efficient with compressorless, high efficiency cooling and solar heating systems, on demand hot water system and PV solar

panels that supply enough power to run your home," says Mike Shea, Sales Manager.

Together with Hallmark SW Corp. and solar expert Mark Snyder, Woodland Homes USA has taken a major step forward in producing **healthier, Money Saving, energy efficient solar homes**. Their goal is to provide solar energy solutions that in the past were not an option because of the cost.

The **GREEN RIBBON®** solar powered home is Energy Star™ rated and designed from the ground

up to use only as much energy as it produces. Built at the Hallmark SW Corporation factory in Loma Linda to **GREEN RIBBON®** home standards, it's designed to make use of Federal and State Utility mandates known as "net metering" which allow homes that are connected to the power grid to receive credit for the unused energy they produce from roof top solar power or other renewable power applications. Woodland Homes USA is committed to making homes that are built around the unique needs of each homeowner, including senior friendly access and livable adaptations. And now, with the help of special financing many seniors will find it possible to purchase a solar powered home from Woodland Homes USA and never even have to make a mortgage payment!
